

Demo line — regression test script (post Double V / accuracy audit)

Call: +1 (516) 961-3838 (testing DID — same agents as public 973-1973)

Avoid the public website number for QA when possible.

Goal: Confirm today's fixes work and nothing critical regressed.

Pass rule: Every required row in the scorecard is Pass before any real prospect demo.

After the call, paste the **Retell Call ID** (dashboard → Calls) into chat so the agent can score `transcript_object` with `call-quality.mjs` .

Rollback (if this test fails badly): see [demo-rollback-pre-double-v.md](#) — restores to commit `b0f1bb3` (before today's Robert Viola / Double V reliability + accuracy work).

Setup (2 min)

- ☐ Phone that can receive SMS (cell) **or** plan to stay on the landline path only
- ☐ Email inbox open (Gmail fine)
- ☐ Quiet room; plan to interrupt mid-sentence twice
- ☐ Optional: second device to watch for SMS while on the call

What "good" feels like

- Agent responds in ~1-2s, not 3-4s dead air
- Speaks a short filler while samples send ("One sec — sending...")
- Never invents junk/spam excuses for missing **SMS**
- Never texts a number that isn't the one you're calling from

Call script (say roughly this)

1. Greeting (~15s) — required

- Let them finish, **or** barge in once with: **"Hello?"**
- Then: **"Hi — what do you guys do?"**

Check	Pass / Fail
Clean AI receptionist intro (no invented owner/staff names)	
No broken mid-word greeting fragments	

2. Spanish switch (~45s) — required

- After their pitch: **"No... hablo español."**
- Then only Spanish: **"¿Cuánto cuesta el servicio?"**
- Then: **"Can we switch back to English?"**

Check	Pass / Fail
Switches (or offers Spanish) within one turn of "hablo español"	

Never says it can't speak Spanish	
No price invented — pushes to free setup call	
Switches back to English cleanly	

3. Interruption feel (~30s) — required

- **"Tell me what's in the Advanced plan."**
- Interrupt twice mid-sentence: **"wait—"** then **"actually—"**
- Let them finish one clean sentence

Check	Pass / Fail
No stranded fragments ("Of", "If you", "Glad you're")	
Doesn't restart the whole pitch after each interrupt	
Feels responsive, not sluggish (no multi-second freezes)	

4. Double V landline path (~60s) — required

(this is the Robert Viola failure mode)

- **"I want a sample of the owner alert text."**
- When they ask if the calling number is a cell:
"No — this is my office landline / desk phone."
- Agree to email when offered

Check	Pass / Fail
Does not send SMS after landline	
Offers email instead (no "different cell")	
Does not go silent >3s waiting on a tool	

5. Email sample + read-back (~90s) — required

- Spell a real email slowly (letter by letter for the part before @)
- Wait for read-back
- Confirm **"Yes"**
- Stay quiet and listen during send

Check	Pass / Fail
Reads email back (spaced letters) before sending	
Speaks a filler while sending (not dead air)	
Honest result ("Sent" / "still sending — can take a minute")	
Email actually arrives (check inbox / junk once if needed)	
Silent stretch during send ≤ 3 seconds	

6. One-ask close (~20s) — required

- After send confirm, **pause** — let them ask about setup once
- Say: **"Let me think about it."**
- If they re-pitch: **"I already heard that."**

Check	Pass / Fail
Setup ask happens once	
Stops when interrupted — no pitch restart	

7. Happy-path SMS sample (optional if you have a cell) (~60s)

Do this on a **second short call** if the first call already burned the landline path.

- Call again from a **cell**
- Ask for sample text → confirm calling number is a cell → yes
- After "Sent," wait up to ~60s for SMS
- If missing: say **"I didn't get the text."**

Check	Pass / Fail
Discloses "only the number you're calling from" before send	
SMS arrives (or agent says it can take up to a minute — no junk/carrier excuses)	
Offers email backup once if text missing	

8. Setup book (optional weekly) (~2 min)

- **"Actually yes — let's book a 15-minute setup."**
- Give name + business
- Pick **first** real slot they offer
- Confirm email spelling → book → check Cal.com invite

Check	Pass / Fail
Uses live calendar (no invented times)	
Invite arrives at the confirmed email	

Final scorecard (all required rows must Pass)

#	Required check	Pass?
1	Greeting / identity	
2	Spanish ≤1 turn	
3	Interruptions / no fragments	
4	Landline → email (no SMS)	

5	Email read-back + ≤3s send silence	
6	One setup ask / no restart	

Call ID: _____

Verdict: ☐ PASS — ok for prospect demos ☐ FAIL — do not demo; roll back or fix

Local checks (no phone) — run anytime

From repo root:

```
node scripts/assert-demo-sim-cases.mjs
node scripts/test-call-quality.mjs
node scripts/test-demo-alert-disclosure.mjs
node scripts/test-demo-alert-compose-wait.mjs
node scripts/test-demo-alert-normalize.mjs
node scripts/test-demo-alert-parallel.mjs
node scripts/test-webhook-consent-gates.mjs
node scripts/push-retell.mjs diff demo-voice
```

diff must say demo-voice: in sync (live matches repo).

If the call fails

1. **Do not** put a prospect on the line.
2. Open [demo-rollback-pre-double-v.md](#) and restore to `b0f1bb3`.
3. Re-run segments 4–6 at minimum (Double V path + email send).
